

## Fillet radius for gear racks

Known points:  $P_0, P_1, P_2$   
 " radius:  $r_f$

This part generated  
 by mirroring the  
 polyline from  $P_0 \rightarrow P_2$

remaining geometry  
 generated by sequential  
 translations by the  
 pitch length.

The distance  $\|P_1 - P_0\|$  determines the maximum value for  $r_f$

$$a = \frac{P_1 - P_0}{\|P_1 - P_0\|}, \quad b = \frac{P_2 - P_1}{\|P_2 - P_1\|}$$

$$\gamma = \cos^{-1}(a \cdot b)$$

$$\|a\| = \|b\| = 1$$

$$\tan\left(\frac{\pi - \gamma}{2}\right) = \frac{r_f}{c} \Leftrightarrow c = r_f \tan\left(\frac{\gamma}{2}\right)$$

$$\text{Let } c = \|P_1 - P_0\|$$

$$r_{f, \max} = \frac{c}{\tan\left(\frac{\gamma}{2}\right)} = \frac{\|P_1 - P_0\|}{\tan\left(\frac{\gamma}{2}\right)}$$
